

### Astons Eyot & Long Meadow plant data

Added into a list of native vascular flora recorded from postal district OX4 (Oxford, inc. Cowley) [from NHM website] *[non-natives added in italics]* [added natives indicated by '#']

[AE = Aston Eyot, includes Shirelake Ditch; LM = Long Meadow] [ML = Meadow Lane]

r = rare, less than 5 individuals; % = garden escape, not locally native; P = planted (+date; includes seeding in by FoAE); P~ = planted, but some spontaneous regeneration

Sources: 1981 - Roger Moreton; 1984 - Joan Farrar; 1996 - Rob Sykes + other data; 2004 - Jacqueline & Ivan Wright, John Hyde & Janet Keene; 2010-14 - Anthony Cheke, Ruth Ashcroft & Claire Malone-Lee.

\* = present + = present in 1980s, not confirmed 1996 K = Kidneys (incl. Swan Island) only [k = before 1996]

- = taxon unaccountably missing from 1996 list P,S = planted, seed sown: with year date [20 omitted] if known X = died out

NB: species unrecorded on Aston's Eyot and Long Meadow have been retained in the list in case of future occurrence or discovery. This is a work in progress, and we welcome additional past and recent records (see Sightings section of website).

[This list is derived from the NHM floral dataset with exotics added: Please note: by including historical as well as current records, the NHM floral dataset attempts to give a picture of native distribution, so not all species on this list will necessarily be present today. Native plant distribution data are derived from the *Atlas of the British Flora*, 3rd Edition (published by the Botanical Society of the British Isles, 1982). The dataset currently contains 1,353 species (about 90 percent of Britain's native flora)].

Family	English name	Scientific name	AE 1981 -4	AE/LM 1996		AE 2004	AE/LM 2010-14
